# 第六讲: 吃奶酪-P1433

胡船长

初航我带你,远航靠自己

# 一、问题搜索树

### 一、问题搜索树

- (1, **2**)
- **4** (2, **4**)
- **6** (3,**6**)
- **1** (4, **1**)
- **3** (5, **3**)
- **5** (6,**5**)

# 排列型枚举问题

## 二、优化1: 状态表示

- (1,2) (2,4)

```
(1,2) (1,4)
(2,4) (2,2)
(3,6) (3,6)
```

1, 3, 5

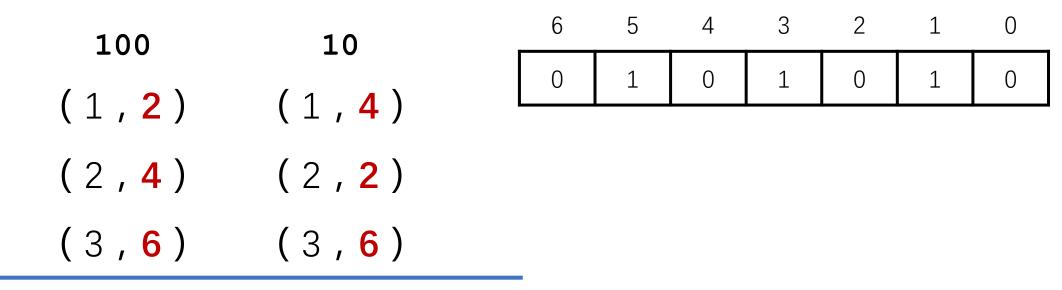

```
      100
      10

      (1,2)
      (1,4)

      (2,4)
      (2,2)

      (3,6)
      (3,6)
```

1, 3, 5

1, 3, 5

```
      100
      10

      (1,2)
      (1,4)

      (2,4)
      (2,2)

      (3,6)
      (3,6)
```

```
1. dp[t][6] = 100
```

2. dp[t][6] = 10 可以继续搜索

1, 3, 5

```
      100
      10

      (1,2)
      (1,4)

      (2,4)
      (2,2)

      (3,6)
      (3,6)
```

1. 
$$dp[t][6] = 10$$

2. dp[t][6] = 100 可以不用搜了

1, 3, 5

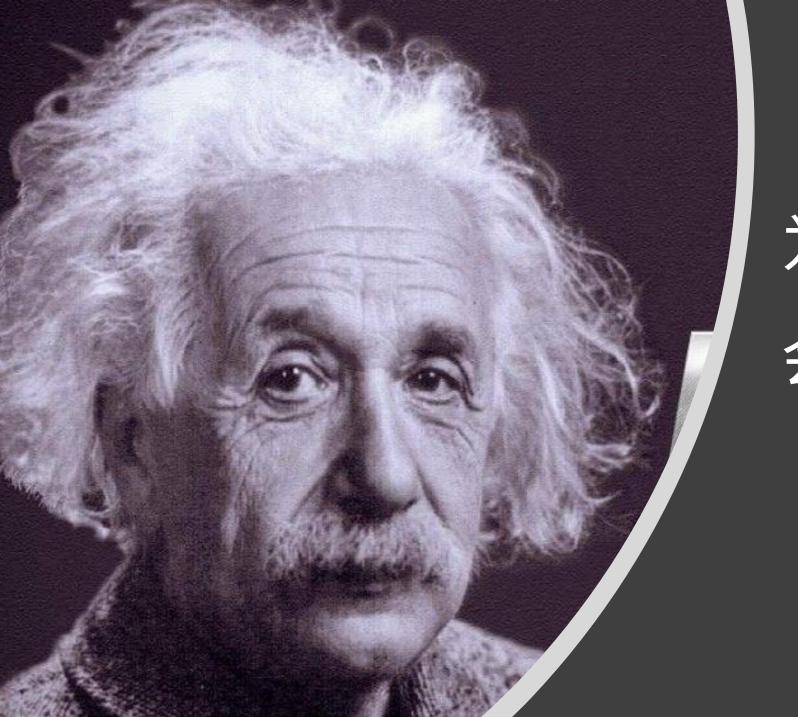

```
1. vim
          #1 X
   vim
                    bash
                           #2 X
                                    bash
                                            23
39 }
40
41 Node *insert_maintain(Node *root) {
42
       if (!hasRedChild(root)) return root;
43
       if (root->lchild->color == RED && root->rchild->color == REL____
44
           if (!hasRedChild(root->lchild) && !hasRedChild(root->rchild)) return root;
45
           root->color = RED:
46
           root->lchild->color = root->rchild->color = BLACK;
47
           return root;
48
49
       if (root->lchild->color == RED) {
50
           if (!hasRedChild(root->lchild)) return root;
51
52
53
       } else {
54
           if (!hasRedChild(root=>rchild)) return root;
55
56
57
```

#### 吃奶酪-P1433:代码演示

ol wode "\_\_thsert(wode "root, the key) (

62 if (root == NIL) return getNewNode(key);

<-6班资料/X.现场撸代码/15.RBT.cpp [FORMAT=unix] [TYPE=CPP] [POS=54,30][62%] 21/09/19 - 20:21

# 为什么 会出一样的题目?
